

Dry Trap Tundish

hotun hiflo Dry Trap Tundish

15mm x 32mm hotun hiflo Dry Trap Tundish

15mm x 32mm hotun hiflo Dry Trap Tundish

Description

The revolutionary hotun hiflo dry trap tundish allows the Temperature & Pressure relief valve to connect directly to the internal waste or soil pipe eliminating the need for external discharge. The non-return valve within the hotun Hiflo dry trap Tundish stops any foul odours from entering up through the Tundish and back into the building. The hotun dry trap tundish allows for easy identification of the historical PRV discharge by touch without the need to dismantle the connection. The hotun hiflo has been approved for use by several big-name boiler and water heater manufacturers and with it's 10 year guarantee it is the perfect solution to any hot water system.

Hotun Shield

The hotun shield is required on any purchase of the hotun hiflo when used in conjunction with a boiler or where an airgap is not required. The hotun shield allows discharging water to be seen clearly and allows for safe installation in accessible areas. The simple drop-over design is simple to use and once the top connection is made the shield is held securely in place. It should not suitable for any unvented product.

Features
